

PLEASE REJECT THE NAB'S PETITION 04-160!!!

I want the right to receive weather and traffic conditions via satellite radio as well as other information in the future.

Its a simple, practice matter--local broadcasting signals are very limited by distance, therefore do not provide broadcast quality or information needed by the long distance traveler. I drive long distances and only satellite radio can provide ALL the information I need in a timely, quality broadcast without any degradation due to weather or distance.

Satellite radio should have the rights provided by our free-enterprise system.

Thank you!
